ABSTRACT OF THE DISCLOSURE

An information system includes at least one user's device connected via a connection unit to a memory device for storing information. There is also a device for generating a set of requested information and advertising information, connected to the memory device for storing information and to the connection unit, and has an entry for inputting the advertising information, and also by including into the system an advertising information memory device, connected to the entry of the device for generating. This device for generating is implemented in order to allow change of consequence of providing requested information and advertising information.
